

# A major upgrade has been released for . . .

*Check out some of the great new features added!*

- **Import your bank statements and reconcile your bank account electronically.** Adagio BankRec supports multiple import formats including Open Financial Exchange (OFX) and user-definable CSV layouts. Match multiple transactions in either "direction". Automatically create a batch from remaining electronic entries.
- Post transactions as reconciled. Speed entry and reconciliation of bank service charges.
- A Cash Flow report has been added to assist in cash planning. Forecast cash shortages and surpluses by aging Receivables, Payables and estimated payroll amounts on a single report to determine expected cash position.
- Reverse checks without having to post a reconciliation.
- Alerts are supported for customers and vendors. All the additional fields added in Adagio Receivables and Adagio Payables V8.0A are now available on Inquiry.
- Many important user interface improvements have been made. F2 edits the currently selected record. F6 automatically launches SmartFinder. The Windows Calculator can be added to the toolbar under User | Options. The date of the last integrity check is shown on the status line.
- Multi-currency is now fully supported. (Adagio MultiCurrency V8.0C is required and must be installed.)
- GridView users can add Views to the Inquiries menu by copying the Workspace and all its Views into the APWIN\Views subdirectory. Workspaces copied into a directory with the same name as a security Group will only be available to members of that Group.
- The Active Users function, in the Help menu, lists the users and applications they have open for the company you have open.
